ENERGY

WOLL Concept cookware thin heat is distributed very fast – which means you turn the temperature down as soon as the boiling point is reached and make great energy savings while cooking.

HEATING

With a 5 mm thick fully encapsulated bottom, Concept guarantees superb performance on induction cooktops providing quick and even heat distribution.

HANDLES AND LIDS

When in use on the hob the handles and lids on the Concept series only get slightly warm and can still be held without using oven gloves.

UTENSILS

Wood, plastic, silicone or metal kitchen utensils all work when cooking with your extraordinary Concept cookware.

MULTIFUNCTIONAL 3 POSITION LID

The innovative glass lid can be placed in different positions for slow cooking, steaming, pouring and easy stirring.

NORMAL

Timely in place for heating, simmering or simmering at slightly lower temperatures.

RAISED

Lid placed on the side handle, perfect for pasta, potatoes and rice and also for fast, easy and safe draining.

PARKED

Lid tucked into the side handle ensures condensation runs into the inside of the pot not onto your kitchen top.

CLEANING

Please boil out your WOLL product 10 minutes for at least 3 minutes before first use. All WOLL Concept Cookware is dishwasher-proof. For heavier dirt we recommend soaking the cookware before cleaning with a stainless steel cleaner.

HOB

The diameter of the cooking area should correspond to the size of the base of your cookware – this will save energy and you can heat your food faster. Always lift your WOLL Concept cookware while moving to keep your hob looking like new.

SAFETY

The Concept side handles and lids are oven-resistant up to 230 °C. But always use an oven glove when removing from the oven.

GUARANTEE

25-year warranty on the body
